7. Configure the Indoor Monitor on the Web Interface

7.1 Login Web

To configure a indoor monitor remotely through the web interface, you must connect to the device via an internet browser on a PC. The indoor monitor and PC from which you plan to access the device must be connected to the same network segment.

In the Internet browser, you must enter the indoor monitor IP address into the address input line. To find the device and figure out its IP address you can use **Net Floor Tool** (that shows all connected to the network devices).

After entering an IP address in the browser, a window to type a login and password will appear.

1-9999

Monitor Number

1

1

Confirm

Notes:

- (1) The **Monitor Number** of the master monitor must be set to 1, and the extensions can be set to 2/3/4..., but two indoor monitors cannot set the same number.
- (2) In same family, set same **Apartment Number** (the **Apartment Number** can be set from 1 to 9999)

Eg: Set master monitor to **Apartment Number 1 / Monitor Number 1** and extension to **Apartment Number 1 / Monitor Number 2**.

Only the master monitor needs to add the door station, and the extensions (**monitor Number 2/3/4...**) will automatically add the door station.

7.3.2 Type-Apartment

When the indoor monitor is connected to an apartment system, set the **Type** to **Apartment**. Please follow the manual of Multi- Apartment Outdoor Station to set the **Unit number**, **Floor Number** and **Apartment Number** of the indoor monitor.

Type	
Unit Number	1 1-98
Floor	On
Floor Number	1 1-99
Apartment Number	1 1-9999
Monitor Number	1

Confirm

7.4 Add Devices

7.4.1 Add the door station automatically

When the indoor monitor and the door station are connected as the wiring diagram, the single-family door station will be automatically configured (this will happen 1-2 minutes after power is applied).

Note: If after 1-2 minutes the connection has not occurred (you cannot make a call) - check if the connection is correct, do a **RESET** on the door station and the indoor monitor to reconnect.

7.4.2 Add the door station manually

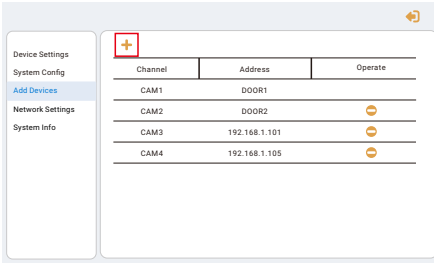

You can follow the steps below to complete the access to the single-family door station.

Step 1: Click **Add Devices** to enter the add devices interface of the indoor monitor web page.

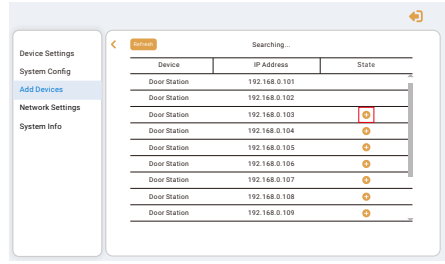

Step 2: Click **+** to enter add devices interface, as shown in pic. 1.

Step 3: Click on the door station to be added to the device list, as shown in pic. 2. The door station can be successfully added to the indoor monitor.

Step 4: After successfully adding the door station, the device address will be displayed in the list on the right, as shown in pic. 1.

Picture 2

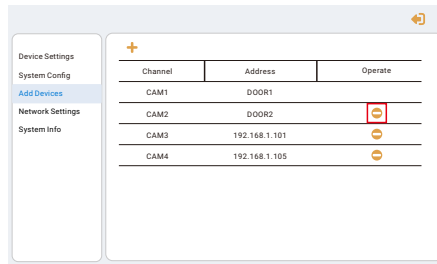

7.4.3 Unbind door station from indoor monitor

Click **Add Devices** to enter the add devices interface of the indoor monitor web page.

→ Click which followed IP address of door station on the list to unbind corresponding devices as your needs.

NOTE:

1. Unbind the door station or reset the door station to resume the factory default password.
2. If you remove the single-family door station unit without turning off the power, the door station will automatically reconnect to the indoor monitor when it restarts.

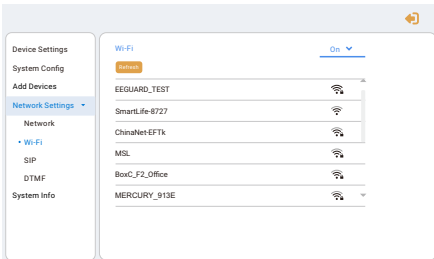

7.5 Network setting

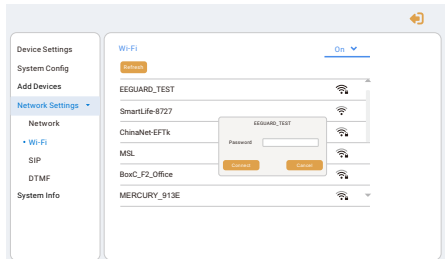

7.5.1 Wi-Fi

Click **Wi-Fi** to enter Wi-Fi setting interface. You can connect to the network via Wi-Fi.

After turning on Wi-Fi, the Wi-Fi list will pop up. Click the Wi-Fi name in the list and enter the password to connect to Wi-Fi.

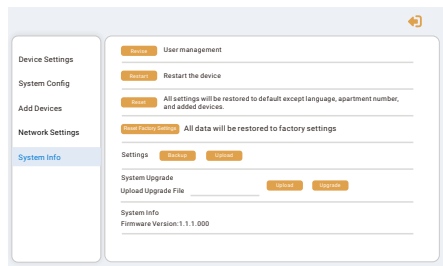

Picture 1

Picture 2
